

## Haico High-Speed Treadmills 4000 and 5000

offers several advantages for research, diagnostic, training  
and rehabilitation

### Ideal tool for professional trainers with race horses:

- No weather restrictions
- Control of speed, distance, uphill and much more
- Reduced impact to legs – running surface of Haico treadmills matches to turf - no hoof problems
- Increases muscular power and quality of gaits
- Horses work willingly on treadmill due to very low construction and silent structure
- More horses can be trained in a shorter period of time
- Conditioning can be started as early as 6 months of age
- Gait can be followed accurately at any time and running speed
- Diagnosing of lameness
- Performance testing with Haico SH standard exercise test (SET) and Competition exercise test (CET) or individual tests, full possibility for programming
- Optional automatic run or manual run
- Optional automatic pulling load unit for increased stress
- All functions can be controlled either manually or automatically via Touch Screen control unit
- No service or oiling points makes using easy and trouble free
- Wide range of safety equipment for secure using as standard
- No large space requirements and long life time

### and for veterinarians:

- Controlled environment for evaluating lameness
- Observations and filming of horse gait
- Endoscope and heart functioning under controlled stress
- Oxygen and CO2 examination
- Performance testing with Haico SH Standard exercise test and Competition exercise test (CET) or individual tests, full possibility for programming
- No large space requirements
- Fast acceptance of horses due to very low and silent structure
- High level of reproducibility of trials
- Safe and easy to use
